

## ***INSTRUMENTATION ADJUSTING***

Just as lasers have replaced scalpels in some surgeries, advanced technology has become available to chiropractors to assist in delivering chiropractic adjustments.

The state-of-the-art Impulse Adjusting Instrument is used to target dysfunctional spinal joints to relieve pain and improve function.

Impulse is twice as fast as other adjusting instruments and 100x faster than manual chiropractic adjustments. The gentle thrust is faster than the body's tendency to tighten up and resist the adjustment.

Chiropractic adjustments with the Impulse Adjusting Instrument feel like a light tapping sensation on the area that is being treated. In most cases, the treatment is painless and after the adjustment, many patients feel relief of pain and improved mobility. Others report a sense of well-being or a soothing calm feeling.
