

Laser Lipo Can Help You

- LOSE INCHES
- SKIN TIGHTENING
- BODY CONTOURING
- CELLULITE REDUCTION
- REDUCE STRETCH MARKS
- TARGETED SPOT REDUCTION
- CHIN "TUCKS" WITH CHIN FAT
- ELIMINATE MUFFIN TOPS EFFORTLESSLY

This Is Safe

Lipo-Laser is a cold laser light, applied directly to the skin, which causes the fat cells to open up and release their "fat" contents. The cells' contents drain into your lymphatic system in the form of triglycerides. When this happens, your fat cell shrinks.

How It Works

This is an FDA approved laser technology. It is just a cold laser light, no cutting or invasive procedures.

**NEW NON-SURGICAL
LASER TECHNOLOGY
SHRINKS FAT WHILE YOU LAY THERE.**

FDA APPROVED EQUIPMENT

Vibration Platform

It's "exercise", only you just stand there. To maximize the results of the Lipo-Laser sessions, we have incorporated the Axis-Plate Elite-3300 Whole Body Vibration Platform work out. By combining the Lipo-Laser treatment with the Axis-Plate Elite-3300, we are insuring that you are getting some exercise that flushes the contents from your shrunken fat cells into your system for easier excretion from the body. The combination of Lipo-Laser and Axis-Plate has proven to be more effective than just Lipo-Laser on its own.

This new laser Technology gives you hope

When considering Lipo-Laser, ask yourself these questions:

- Are you feeling frustrated that you haven't lost those inches with your diet and exercise regimen?
- Have you lost your motivation to continue your diet and exercise regimen because you can't seem to lose the inches?
- Do you have problem areas of fat that you can't seem to get rid of?
- Do you have cellulite on your skin that you would like to smooth out?
- Do you have excess skin after losing weight?
- Would seeing faster results help you regain your motivation to eat right, exercise, and make lasting lifestyle changes?

If you answered yes to any of these questions, then Lipo-Laser technology may be the answer for you. When you see the fat come off quickly, you WILL regain your hope and motivation. You will become more inspired to make the changes that you envision.

Many patients find it easier to live a healthier lifestyle after seeing the results this technology produces.

HOW DOES IT WORK?

Lipo-Laser's cold laser penetrates only a few millimeters beneath your skin, targeting the subcutaneous fat cells, without risking damage to your organs. The laser perforates the Adipocytes (or fat cells) to literally drain them (which makes them smaller). The cells' contents drain into your lymphatic system in the form of triglycerides. The triglycerides are broken down, metabolized by the body, and eliminated, in part, through the urinary tract. So, as you lay on the table, the inches literally melt off.

FAQs

WHAT IS LASER LIPO?

Laser Lipo is a FDA approved treatment method to shrink fat cells and lose inches in targeted areas. It is a cold laser light, applied directly to the skin, which causes the fat cells to open up and release their "fat" contents. The main goal of the Lipo-Laser is to shrink the fat cells.

HOW MANY TREATMENTS WILL I NEED?

The amount of sessions is based on your requirements and goals, although, a minimum of 6 sessions is strongly recommended to get noticeable results. For the very best results, 9-18 sessions is recommended.

HOW LONG IS EACH TREATMENT?

Each session is 30 minutes long, and consists of 20 minutes on the laser, and 10 minutes on the vibration plate. Sessions consist of 3 appointments per week for 2-6 weeks. For the first 20 minutes, you lay back and relax in a comfortable position while paddles are placed on the target areas. The next 10 minutes consist of standing on our Whole Body Vibration Platform for exercise and lymphatic drainage.

IS IT COMFORTABLE?

Most people feel very little during the treatment and find it comfortable and relaxing. The typical sensation felt is slight warmth where the treatment pads are in contact with your skin.

IS IT SAFE?

Yes, this treatment method is FDA approved to be completely safe with no side effects. The laser simply triggers a natural reaction of fat cell release. The process does not cause any damage and cells remain intact, just smaller, giving immediate results.

WHERE DOES THE FAT GO?

During the procedure, about 500 calories worth of fat are released into your body from the specific areas treated with the laser. The fat cells' contents drain into your lymphatic system in the form of triglycerides. This needs flushed out of your system so as to avoid having them settle elsewhere on your body. That is why you have to stand on the vibrating platform for 10 minutes after the paddles are removed. This stimulates lymphatic drainage to flush out the calories from your system and jump start the fat loss process!

HOW LONG WILL RESULTS LAST?

We shrink you down, but it is up to you to keep it that way. Results can be long-term, provided you drink plenty of water, your calorie intake and eating plan is stable, and you engage in regular exercise. Further treatments can be performed to correct diet indulgence or target another area of the body.

IS IT SUITABLE FOR EVERYONE?

Lipo-Laser can be used on both men and women and can treat most areas of the body. As with any treatment, people with certain medical conditions should not use the Lipo-Laser method. Your practitioner will go through this during your consultation prior to treatment to confirm suitability.

WHEN WILL I SEE RESULTS?

Most people who use Lipo-Laser will see some results even after their first session and results improve with each successive session. Over the course of consecutive treatments, you can achieve dramatic fat loss which translates into inches lost! To get the best results, you should refrain from eating for two hours before and two hours after each treatment. It is also recommended that you drink plenty of water on the day of your treatment, avoid carbohydrates, and be sure to do some cardiovascular exercise.
