

FROM THE EXPERTS

Are You Getting a Flu Shot?

by **Dr. Andrew T. Brady**

Physician**

Here are 9 reasons why I will not be:

1. The flu shot contains aluminum (a known neurotoxin), mercury (in some), formaldehyde (a known carcinogen), DNA and kidney cell protein from a cocker spaniel (MDCK), Triton X-100 (a detergent used in many cleaning products), and virus fragments.

2. I have 35 different research articles in my possession that have been published in peer-reviewed medical journals that show aluminum preservatives found in vaccinations can bio-accumulate in the brain and induce brain cell death. This is called immunoexcitotoxicity.

3. This year, vaccine effectiveness is estimated to be 47%. During the 2015 season, it was only 19% effective.

4. The CDC tries to make the annual death toll from the flu sound catastrophic by combining pneumonia deaths and flu deaths. The CDC defends and justifies this by saying pneumonia is a complication from the flu. There is no substantial evidence that getting a flu shot prevents pneumonia; they are caused by different viruses.

5. The flu shots currently given have never been tested for mutagenic or carcinogenic potential. This means that the flu shot could cause genetic mutations or cancer.

6. According to the 2016 Vaccine Adverse Event Reporting System (VAERS), there were 17,286 adverse reactions reported which included death, seizures, paralysis and permanent disability. It's worth noting that this number accounts for only 10% of all adverse reactions that actually occur.

7. Some say they get the flu shot because they don't want to spread it to family or friends who have weak immune systems. Getting vaccinated does not prevent you from being a carrier.

8. Every major U.S. vaccine manufacturer has pled guilty to fraud in the last four years alone. These are the companies "educating" our doctors about their flu shots and funding the studies regarding their safety.

9. Vaccine manufacturers cannot be sued if you become permanently disabled by one of their flu shots. They are protected by the government.

Some of you may read this and immediately get mad and want to write complaints about this article, but keep this in mind - this is not an opinion piece. This is an article based on published statistics and facts. I am merely the messenger. Whether I am a chiropractic physician, a medical doctor or a janitor, it does not change these facts.

I encourage you to research each of these for yourself and make educated healthcare decisions. Feel free to email me at atbrady05@gmail.com, if you would like the references for this article.
