

SARAPIN®

SARAPIN® is an injectable analgesic indicated for the management of muscular or neuropathic pain that may be treated by local infiltration or nerve block. SARAPIN® is a biological medicine – which means it is derived from a naturally occurring organism (the Pitcher plant). It works by stopping pain signals in the nerves of the spine where they exit the spinal column. The distillate of a suspension of powdered *Sarracenia purpurea* (Pitcher Plant), SARAPIN® has been used safely and effectively for pain management by physicians for over 70 years.

Although the mechanism of action of SARAPIN® is unknown, its analgesic properties are thought to be the result of its selective effect on the C-type nerve fibers. This targeted action effectively manages pain by acting on the sensory nerves, without any effect on motor nerves, with no tissue destruction or systemic reactions, and without any change in skin sensation.

SARAPIN® can also be used as a trigger point injection. Toxicity tests revealed that SARAPIN® is harmless, and no adverse events have been associated with the use of SARAPIN® throughout its 70 year history.

SARAPIN® is now offered at Align Health and Holistic Medical Center. Call today and set up an appointment with our Nurse Practitioner.
