Albaplex®

Supports Proper Kidney, Cardiovascular, and Cellular Function

Various nutrients from plants, such as alfalfa, peas, and carrots, combine with numerous vitamins and minerals from animal tissues to synergistically promote proper cardiovascular, cellular, and kidney function. Albaplex employs the use of Protomorphogen™ extracts, such as bovine kidney PMG™ extract and bovine liver PMG™ extract, which provide concentrated nutrients to support the corresponding human organs. The combination of plants and animal tissues in Albaplex work together to promote healthy kidney and cardiovascular function. Ingredients like the carrot contain important antioxidants and neurotransmitters that stimulate the immune system and promote healthy cellular function. The antioxidants in Albaplex protect the body from free radicals that cause oxidation of tissues.†

How Albaplex Keeps You Healthy

Promotes cardiovascular health
Albaplex contains peas, which provide unsaturated fatty acids and folic acid. Albaplex also contains numerous other vitamins, including vitamin C and niacin, that work together to support cardiovascular health.†

Maintains healthy cellular function
Vitamin B₆ in Albaplex helps to synthesize nucleic acids RNA and DNA—the molecules that carry genetic instructions for normal cellular growth and reproduction. In a study of vegetable-protein products, peas were associated with a protective relationship from certain diseases. Animal models also show that peas help stimulate immune response through interaction with T-lymphocytes. The plant ingredients in Albaplex provide a high level of beta carotene, which is recognized for its powerful antioxidant activity and other important cellular functions.†

Supports kidney function
Albaplex provides vitamin B6 to help maintain the delicate water balance throughout the entire body. Vitamin B6 has been successfully administered as a natural diuretic to help relieve water retention. Vitamin B6 also helps maintain an appropriate and consistent sodium and potassium balance. The kidneys play a major role in regulating extracellular potassium. A deficiency results in impaired urine concentration and an increase in acid in the urine. Albaplex combines vitamins, minerals, and animal tissues to support proper kidney function.†

Albaplex®

What Makes Albaplex Unique

Product Attributes
Multiple nutrients from a variety of plant and animal sources
› Promote healthy kidney function
› Extracts from bovine tissues provide nutrients and support to the corresponding tissues in humans
› Vitamins, minerals, and nutrients from plants and animal tissues work synergistically for maximum effect†

Contains Protomorphogen™ extracts
› Standard Process uses a unique manufacturing method of deriving tissue cell determinants from animal glands and organs
› Help provide cellular support and rehabilitation to the corresponding human tissues
› Important antigenic properties of nucleoprotein-mineral determinants are the foundation of the product†

Certified Organic Farming
A healthy ecosystem is created by using organic farming techniques, such as rotating crops, fertilizing the soil with nutrient-rich cover crops and byproducts from our processing, practicing strict weed-control standards, and continually monitoring the health of our plants
› Assures the soil is laden with minerals and nutrients
› Ensures plants are nutritionally complete and free from synthetic pesticides

Manufacturing and Quality-Control Processes
Upon harvesting, nutrient-rich plants are immediately washed and promptly processed
› Preserves nutritional integrity

Low-temperature, high-vacuum drying technique
› Preserves the enzymatic vitality and nutritional potential of ingredients

Not disassociated into isolated components
› The nutrients in Albaplex are processed to remain intact, complete nutritional compounds

Degreed microbiologists and chemists in our on-site laboratories continually conduct bacterial and analytical tests on raw materials, product batches, and finished products
› Ensures consistent quality and safety

Vitamin and mineral analyses validate product content and specifications
› Assures high-quality essential nutrients are delivered

Whole Food Philosophy
Our founder, Dr. Royal Lee, challenged common scientific beliefs by choosing a holistic approach of providing nutrients through whole foods. His goal was to provide nutrients as they are found in nature—in a whole food state where he believed their natural potency and efficacy would be realized. Dr. Lee believed that when nutrients remain intact and are not split from their natural associated synergists—known and unknown—bioactivity is markedly enhanced over isolated nutrients. Following this philosophy, even a small amount of a whole food concentrate will offer enhanced nutritional support, compared to an isolated or fractionated vitamin. Therefore, one should examine the source of nutrients rather than looking at the quantities of individual nutrients on product labels.

Studies on nutrients generally use large doses and these studies, some of which are cited below, are the basis for much of the information we provide you in this publication about whole food ingredients. See the supplement facts for Albaplex®.
