

## Effective ~ Safe ~ Quality

For something as important as your pet's health, the supplements you feed must be effective, safe, and of the highest quality. Your veterinarian trusts and recommends Standard Process Veterinary Formulas to support the specific health needs of your pet.

Canine Immune System Support and Feline Immune System Support provide targeted nutrition for optimal immune function.

**In addition to other nutritional supplements for dogs and cats, Standard Process offers Equine Immune Support for horses. Get complete details from your veterinary professional.**

## A Strong Defense Is Their Best Offense

A healthy immune system is critical to your pet's well-being. The immune system must work around the clock to protect the body from potential invaders. An immune system operating at less than full throttle can make your pet susceptible to any number of health challenges. Veterinary Formulas provide the nutrients pets need to support a strong immune response.

# Quality

*From Seed to Supplement®*

At our office, we believe that given the proper nutrition, your pet has amazing capabilities of healing itself. We also believe that nutrition should be individualized to meet each pet's needs. For these reasons and many more, we proudly recommend Standard Process Veterinary Formulas.

# When Does My Pet Need Immune System Support?

The immune system is one of the most important systems in your pet's body. When working normally, the immune system helps your pet live a happy and healthy life. But what if your pet's immune system is compromised? How can you help?

Veterinary Formulas provide vitamins, minerals, organ and tissue extracts, and botanicals not typically found in the modern pet's diet. Because Veterinary Formulas are concentrated using low heat, they supply a multitude of enzymes, trace minerals, and plant components vital to keeping your pet's immune system in top condition.

## Puppies and Kittens

Between 6 weeks and 20 weeks of age, maternal antibodies are lost; the immune system is still immature; and tiny bodies are exposed to powerful vaccinations, chemical dewormers, flea and tick protection, etc.

## Pregnancy

Even with the best diet, nutrients are diverted from the mother to her unborn litter. If the mother's immune system weakens, her babies' immune systems will often become weak. Nutritional support of the immune system during pregnancy can help newborns handle immune challenges.

## Seniors

As pets age, their ability to fight off invaders decreases, making them more susceptible to these challenges.

## Pets Under Stress

Stress taxes your pet's body and compromises the immune system—whether the stressor is medication or another source of physical or mental strain.
