Hair Mineral Assessment

Toxic metals such as Arsenic, Lead, Cadmium, Aluminum, and Mercury will disrupt normal cell function. The Hair Analysis will tell you if you have been exposed in the past. Past exposure to toxic metals will give us a picture of why you may not be feeling your best and a look into how toxic you may be.

Healthy minerals are viewed from the stand point of having enough nutrients coming in your diet to allow for adequate excretion in the hair. A great way to make sure there are no underlying deficiencies is to get a hair analysis.

A total of 36 nutritional minerals and toxic metals are tested.

Aluminum	Antimony	Arsenic
Barium	Beryllium	Bismuth
Boron	Cadmium	Calcium
Chromium	Cobalt	Copper
Germanium	Iodine	Iron
Lead	Lithium	Magnesium
Manganese	Mercury	Molybdenum
Nickel	Phosphorus	Platinum
Potassium	Rubidium	Selenium
Silver	Sodium	Strontium
Sulfur	Thallium	Tin
Titanium	Uranium	Vanadium
Zinc	Zirconium	

The Hair Analysis lets us know the rate of nutritional minerals and toxic metals leaving the body.
