Informed Consent for Chiropractic Care

When a patient seeks chiropractic health care and we accept a patient for such care, it is essential for both of us to be working for the same objective. It is important that each patient understand both the objective(s) and the method(s) that will be used to attain this objective. This will prevent any confusion or disappointment. You have the right, as a patient, to be informed about the condition and the recommended care to be provided so that you make the decision whether or not to undergo chiropractic care after being advised of the known benefits, risks, and alternatives.

Chiropractic is a science, philosophy and art which concerns itself with the relationship between the spinal structure and the health of the nervous system. As chiropractors we understand that health is a state of optimal physical, mental, and social well-being, not merely the absence of disease or infirmity.

One disturbance to the nervous system is called a vertebral subluxation. This occurs when one or more of the 24 vertebra in the spinal column become misaligned and/or do not move properly. This causes an unhealthy change to nerve function and interference to the nervous system. This may result in pain and dysfunction or may be entirely asymptomatic.

Subluxations are corrected and/or reduced by a chiropractic adjustment. An adjustment is the specific application of force to correct and/or reduce vertebral subluxation. Our chiropractic method of correction is by specific adjustments to the spine. Adjustments are done by hand where the doctor will put pressure on the specific segment(s) of the spine to adjust the vertebrae into a better position.

If at the beginning or during the course of care we encounter a non-chiropractic or unusual findings, we will advise you of those findings and recommend some further testing or refer you out to another health care provider.

Chiropractic care has been proven to be very safe and effective. It is not unusual however, to be sore after your first few corrective adjustments. Although rare it is possible to suffer from other side effects; i.e. muscle spasms, stiffness, rib fracture, headache, dizziness and stroke.

All questions regarding the doctor's objective to my care in this office has been answered to my complete satisfaction. The benefits, risks and alternatives of chiropractic care have been explained to me to my satisfaction. I have read and fully understand the above statements and therefore accept chiropractic care on this basis.
